Program Description

• STEM designated Program

The BSE Engineering program at Jefferson is accredited by the Engineering Accreditation Commission of ABET. The program prepares graduates with a breadth of engineering skills and knowledge while developing specific expertise and analytical skills in an area of technical concentration, including Industrial Engineering and Operational Analytics as well as Textile Engineering. Through applied coursework culminating in a two-semester senior design project, the graduates gain hands-on, practical experience to obtain professional licensure, succeed in the industry, or pursue graduate studies.

Learning Goals/Outcomes

- an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- an ability to communicate effectively with a range of audiences
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.
