Program Description

The Graduate Certificate in Cannabis Medicine is designed to provide an understanding of the underlying science and clinical applications of endocannabinoids, phytocannabinoids, and synthetic cannabinoids.

Learning Goals/Outcomes

- Apply clinical and basic sciences knowledge to identify evidence-based cannabis therapies for specific medical conditions.
- Explain mechanisms of action, functional roles, and absorption/distribution/metabolism/excretion of cannabinoids in humans.
- Describe proper administration and safe dosing, and identify its physical, psychiatric, and psychological effects of medical cannabis.
