Program Description

The Masters in Applied Health Economics and Outcomes Research (MS-AHEOR) program focuses on assessing the value of pharmaceuticals and healthcare interventions at large and understanding their impact on patient outcomes and healthcare systems. This expertise is valuable in pharmaceutical companies, health insurance organizations, government health agencies, and other healthcare-related industries. The AHEOR master's degree comprises two tracks – industry track and research track – both include ten courses and a capstone project, which is specifically designed to enhance the student's career trajectory.
